

Part 1: Product Requirements Document (PRD)

Product Name: Kenvenience Store (KENTECH Dormitory Seven-Eleven Smart Service)

Target Version: 1.0.0

1. Product Overview

Kenvenience Store is a dedicated web service designed for KENTECH students living in the dormitory to enhance their convenience when using the newly opened on-campus Seven-Eleven convenience store. The service addresses typical university dormitory pain points by providing real-time stock/event inquiries, an item ordering request system, and a "Split-the-Deal" community feature.

2. Target Users & Pain Points

- **Target Users:** KENTECH undergraduate/graduate dormitory residents.
- **User Pain Points:**
 - **Information Asymmetry:** Students walk down to the store without knowing if their favorite late-night snacks or milk are in stock.
 - **Financial & Quantity Burden:** Promotional deals like 1+1 or 2+1 are highly attractive, but buying multiple items at once is burdensome for a single student due to limited storage and budget.
 - **Stock Limitations:** Since the store is located on campus, specialized items that students frequently need might not be readily available unless requested.

3. Project Goals

- Provide a centralized dashboard for dormitory residents to check current store promotions (1+1, 2+1).
- Establish a crowd-sourced request channel for ordering specific products.
- Foster a cooperative student community where residents can bundle purchases to take advantage of promotional discounts without waste.

4. Core User Scenario

Scenario: Joining a "Split-the-Deal" for a 2+1 Ice Cream Promotion

Minsoo, a KENTECH sophomore, wants to buy a specific ice cream that is currently on a 2+1 promotion. However, he doesn't want to eat three ice creams or spend money on all of them. He opens the **Kenvenience** web service, navigates to the "Event Split" tab, and sees that another student has already opened a group for that exact ice cream and is waiting for one more person. Minsoo clicks "Join Deal," matches with the peer, meets up at the convenience store, and buys the item at a discounted rate.

5. Feature List & Priorities

Feature ID	Feature Name	Description	Priority
F-01	Stock & Promo Viewer	A dashboard displaying current 1+1 and 2+1 events and essential item stock statuses.	Must-have
F-02	Item Pre-Order Request	An interactive form where students can request the store manager to stock/order specific items.	Must-have
F-03	Split-the-Deal Hub	A dynamic board where students can create or join groups to split 1+1 or 2+1 promotional items.	Should-have
F-04	Live Status Filtering	Fast filtering buttons to sort items by categories (Snack, Beverage, Instant Meal) or event types.	Nice-to-have

6. Page Structure

- **Home Page (Dashboard):** Banner for today's top promotions, a live quick-view of active "Split-the-Deal" recruitments, and general store announcements.
- **Promo & Stock Page:** A complete list of products currently on 1+1 or 2+1 events with filtering capabilities.
- **Order Request Page:** A submission form allowing students to type in item names, upload images (optional URL), and write reasons for stock requests.
- **Split-the-Deal Board:** An interactive dashboard where users can view active posts (e.g., *"Need 1 person for 2+1 Coffee"*), click to join, or post a new split request.

7. Technical Requirements

- **Frontend:** Frontend-only single-page or multi-page architecture using HTML5, CSS3, and modern **Vanilla JavaScript** (or **React** depending on proficiency).
- **State Management:** Local browser localStorage will mock the backend data for

saving item requests and active "Split-the-Deal" sessions.

- **Deployment:** Publicly hosted via **Vercel**.

8. Design Requirements

- **Theme Colors:** Seven-Eleven Identity Colors (Deep Green, Bright Orange, Dark Red) mixed with a clean white/gray background for a modern UI.
- **Layout:** Responsive grid system for seamless mobile-first viewing, as most students will access the service via smartphones while in the dormitory.
- **UX Principles:** Clear navigation bar at the top, card-based item layouts, and prominent Call-to-Action (CTA) buttons for "Join Deal" and "Submit Request".

9. Milestones

1. **Phase 1:** PRD Writing & UI/UX Wireframing
2. **Phase 2:** HTML Boilerplate & CSS Styling (Responsive Grid)
3. **Phase 3:** JavaScript Core Logic Implementation (Mock Data, LocalStorage Integration)
4. **Phase 4:** Vercel Deployment & AI Development Report Documentation
